COMP2119 Introduction to Data Structures and Algorithms Assignment 1 - Recursion, Mathematical Induction and Algorithm Analysis

Cheng Ho Ming, Eric (3036216734)

September 10, 2024

1 Asymptotic Bounds

$n^{\pi}, \pi^n, n^n, \log n, \pi^{\log n}, n^{\log \pi}, \frac{n}{\log \pi}, \frac{n}{\log n}, \frac{n}{\log \log n}, \log \frac{n}{\log n}, \pi^{\log(2n)}, n^{\log 2\pi}, \sqrt{\sum_{i=1}^{n}(i+1)}, 1910n! + 316n^n$

2 Recurrence Relations

(a) $T(n) = T(n-1) + 3 \quad \text{for } n > 0$
$= T(n-2) + 3 + 3 \quad \text{for } n > 1$
$= \dots$
$= T(0) + 3n \quad \text{for } n > 1$
$= 3n \quad \text{for } n > 1$
$\therefore T(n) = \Theta(n)$

(b) Assume that n is a power of 3, i.e. $n = 3^k$ for $k \in \mathbb{N}$, and $\log_3 n = k$,
$\because T(n) = 3T(\frac{n}{3}) + n \quad \text{for } n \neq 1$
$= 3(3T(\frac{n}{9}) + \frac{n}{3}) + n \quad \text{for } n >= 9$
$= 9T(\frac{n}{9}) + n + n \quad \text{for } n >= 9$
$= ...$
$\therefore T(n) = 3^k T(\frac{n}{3^k}) + k * n$
$= 3^k T(1) + k * n$
$= 0 + k * n$
$= kn$
$= n * \log_3 n$
$\therefore T(n) = \Theta(n \log n)$

(c) Assume that n is a power of 3, i.e. $n = 3^k$ for $k \in \mathbb{N}$, and $\log_3 n = k$,
$\because T(n) = 4T(\frac{n}{3}) + 1$
$=$
$\therefore T(n) = \Theta()$

(d) Assume that n is a power of 2, i.e. $n = 2^k$ for $k \in \mathbb{N}$, and $\log_2 n = k$,
$\because T(n) = nT(\frac{n}{2}) + n - 1$
$=$
$\therefore T(n) = \Theta()$

3 Mathematical Induction

(a) Let $f(n)$ be the predicate "$1 * 2^1 + 2 * 2^2 + 3 * 2^3 + ... + n * 2^n = (n-1)2^{n+1} + 2$" for $\forall n \in \mathbb{Z}^+$.

For $n = 1$, L.H.S. $= 1 * 2^1$

$= 2$

R.H.S. $= (1-1)2^{1+1} + 2$

$= 2$

$\because$ L.H.S. = R.H.S.

$\therefore f(1)$ is true.

4 Algorithm Design
